Strategic Background: Innovation Agent Working Group

- Based on ISO 560xx
- **Innovation capability assessment model**
- **Case studies using AI**
- First **MOOC** with ASA using AI for strategic intelligence management

Assessment Model

Innovation Capability Assessment

Process Reference Model

Process Assessment Model

Based on ISO 560xx Series

Version 1.0

- Version 1.0 is edited till Q4 2025/ Q1 2026

Process ID
TIM.1
Process name
Preparing for Idea Management
Process purpose
The purpose of the TIM (Tools and Methods for Idea Management) Preparing for Idea Management process is to prepare and support a holistic idea management including a schema to categorise and rate ideas to make go/no-go decisions about ideas.
Process outcomes
As a result of full achievement of this process attribute PA1.1 this results in: 1) Methods and tools used for idea management considering all inputs in a holistic approach (open innovation). 2) Innovation concepts. 3) Defined criteria such as market needs, technological feasibility, social acceptance, maturity of the idea, business model fit, interested party expectations, environmental responsibility, estimated cost or time to select ideas. 4) An established set of questions to analyse the context of ideas. 5) A rating sheet or schema for ideas to analyze ideas and make go/no-go decisions.

Title: Automotive SPICE Process Assessment / Reference Model

Author(s): ASA Innovation Agent Working Group
Automotive Skills Alliance

Version: 1.0

Date: 2025-08-29

Status: Draft

Support: **Digital & Green Skills Towards Future of the Mobility Ecosystem** (Trireme) is a four-year transnational project funded under the European Union's Erasmus+ programme. The project consortium is established to encompass a range of activities to bridge both conceptual and technological facets of the Mobility-Transport-Automotive ecosystem. Simultaneously, the consortium endeavours to foster sectoral collaboration, particularly focusing on enhancing skills within the broader mobility ecosystem. The project duration is from 01/03/2024 to 29/02/2028.

Funded by the European Union. Views and opinions expressed are however those of the author(s) only and do not necessarily reflect those of the European Union or the European Education and Culture Executive Agency. Neither the European Union nor the granting authority can be held responsible for them.

Preparing for Idea Management

TIM.1 1:

SummaryNotesSave AllEvidences

✓ TIM.1.BP1

Prepare for a successful idea management by adopting a holistic approach supported by a defined set of tools and methods. All relevant questions, methods of application and other considerations need to be well considered when analyzing ideas. Each of the considerations should be related to the phases mentioned in ISO 56002: identification, concept creation and validation which are aimed at reducing uncertainties to be able to make a decision. The intended outcome of the idea management activities is to deliver validated innovation concepts that are ready for development.

[Outcome 1]

N ☐ P ☐ L ☐ F ☒ Not App. ☐ ☒ Note

✓ TIM.1.BP2

Consider the description of key concepts when managing ideas. Ideas and opportunities can have different levels of uncertainty. The organization should treat ideas and/or opportunities as the starting points for idea management. Idea management uses these inputs to create and validate innovation concepts, which can then be developed and deployed to realize value.

[Outcome 2]

N ☐ P ☐ L ☐ F ☒ Not App. ☐ ☒ Note

✓ TIM.1.BP3

Learn the factors needed to reduce uncertainties to make a clear and agreed selection of ideas. Uncertainty arises from a state of deficiency of information, understanding or knowledge that increases the unpredictability of a desired or potential outcome. These uncertainties address factors such as market need, technological feasibility, social acceptance, maturity of the idea, business model fit, interested party expectations, environmental responsibility, estimated cost or time to develop.

[Outcome 3]

N ☐ P ☐ L ☐ F ☒ Not App. ☐ ☒ Note

✓ TIM.1.BP4

Use a set of questions to analyse the context of the ideas. Consider the analysed context in the idea management. Example questions are:

AI Case Studies / Methods

- AI Used in ISO 56007 “Tools and methods for managing opportunities and ideas”
- AI Used in ISO 56006 “Strategic Intelligence Management”

**AI models
as part of an
open
innovation
strategy**

Approach/Method

- Applied in cooperation with the ASA innovation agent task force and the SOQRATES Group

Step 1: Identifying the problem to solve
Step 2: Using AI for Data Analysis and Acquisition
Step 3: Creating consistency among AI model outputs
Step 4: Adding and Applying Data Evaluation Criteria
Step 5: Automatic analysis of trusted source criteria
Step 6: Review and Selection of Studies and Answers
Step 7: Extract and present the results to the management

Involved/Supporting:

**Innovation Agent Task Force/ASA
22 countries, 41 members**

**SOQRATES Working Group
66 experts from leading European
Tier 1 and OEM**

Future Outlook

Automation and Integration of different LLMs with other types of AI models in a service software.

Research project EuroSPI – ISCN – TU Graz (supported by FFG fir SW research and development, strategy developed in TRIREME)

New architecture (team lead Laura Aschbacher):

Future EuroSPI/ASA Service

Field tests with innovation agent task force and SOQRATES

SmartSPI AI (component)

This tool is part of the **expert review tool** assisting you in discovering and evaluating information related to *Software Process Improvement (SPI)*. It assesses each publication based on essential metrics such as citation rate, timeliness, and—most importantly—its relevance to industry applications and overall usefulness. The tool is particularly valuable for identifying recent trends in the field, and highlighting research with practical impact. The output comprises of JSON and CSV and provides information to the expert review tool.

About Trireme

Digital & Green Skills Towards Future of the Mobility Ecosystem (Trireme) is a four-year transnational project funded under the European Union's Erasmus+ programme. The project consortium is established to encompass a range of activities to bridge both conceptual and technological facets of the Mobility-Transport-Automotive ecosystem. Simultaneously, the consortium endeavours to foster sectoral collaboration, particularly focusing on enhancing skills within the broader mobility ecosystem. The project duration is from 01/03/2024 to 29/02/2028.

PROJECT PARTNERS

The TRIREME project is developed by **31 partners** from **14 different countries**: 6 Higher-Education institutions, 4 VET-Education institutions / umbrella associations, 7 Industry or Industry representatives on EU or National levels, 1 Region, 3 Social partners, 5 SMEs and 5 other types of partners, such as training providers, consultancies and NGO.

For the complete list of partners: <https://project-trireme.eu/en/aboutus>
