What is **CYBERENG?**

Certified Cybersecurity Engineer and Manager Course

- 2-year (2020-2022/23) Erasmus+ co-funded project
- Project aims to
 - **Define needs and training for cybersecurity engineer and manager (needed in Sys&SW&HW development of modern electronic automotive systems, V2X communication)**
 - Main outcome is to **develop training courses and material for the industry and universities.**
 - 2 – 5 days course
 - Including international certificate & Automotive Skills Alliance badge
 - Course will be included in the university study & offered to industry

Taskbar with icons for Windows, Search, Mail, Teams, Edge, Chrome, File Explorer, and PowerPoint. Includes a weather widget showing 20°C Sunny.

Project Group 13

Observations and Experiences with the PAM v3.1 and Guidelines v1.0

VDA QMCVerband der Automobilindustrie
Qualitäts-Management-Center

Despite of great acceptance in worldwide community still some problems and misconceptions need to be addressed

- Reproducibility & comparability of assessment results have not improved
- Assessment duration increased
- Guideline content used as pure checklists
- Growing formalism instead of understanding the context
- Engineers in projects : frustration up – motivation down

ASPICE 3.1 VDA Scope and Safety Extension of ASPICE Demo Safety Extension

Software Requirements Analysis The purpose of the Software Requirements Analysis Process is to transform the software related parts of the system requirements into a set of software requirements.

SWE.1 1:  Summary  Notes  Save All  Evidences Recommendations  Rules  Safety

SWE.1.BP1 **Specify software requirements.** Use the system requirements and the system architecture and changes to system requirements and architecture to identify the required functions and capabilities of the software. Specify functional and non-functional software requirements in a software requirements specification. [OUTCOME 1, 5, 7]

ISO 26262 Extended Questions:

- Are software safety requirements in line with the technical safety requirements (Requirements, interfaces, constraints,)?
- Are all software safety requirements marked as safety requirements and referred to their source?
- Are semiformal notations used for ASIL C and D?
- Are software safety diagnose requirements assigned to an appropriate diagnose level (e.g. e-gas model with (Level 1 - base diagnosis, Level 2 - independent plausibility checks and functional diagnosis, Level 3 - system control, checking the call sequences, processor, etc.)
- Is the software state machine described and is the safe state clearly separated?
- Is the independence of the monitoring software clearly described?
- Are the software signals specified in the hardware software interface?
- Is there a diagnose matrix describing safety diagnose L2 and L3 functions and the expected fault reaction?
- Are there non functional software requirements relating to the ISO 26262 method tables?
- Are there non functional software requirements relating to the ASIL level assigned influencing the software architecture?
- Is the operating software and the related task management and synchronization of the control software considered?
- Are the appropriate methods used for analysis (see method tables in ISO 26262)?

Introduction

The process "Process Improvement" (PIM.3) is part of the **assessment model** but is still not in the scope of the processes selected by the automotive manufacturers for assessing the suppliers.

The VDA scope, the **Fiat Chrysler scope**, in fact all scope selections did not select PIM.3 but rather focused on **special topics**.

On the other hand, it is **known that many improvement projects fail**.

→ Therefore, it is an interesting question why this process has not been selected so far.

In November 2021, the iNTACS ("International Assessor Certification Scheme e.V.") established the strategy of a certified process expert training (scheme presentation will be a Keynote by B. Sechser).

Process expert training can be attended by non-assessors and is a pre-training before attending a provisional assessor course.

The idea is to teach the practical understanding of processes and how to implement improvement programs in organisations. This new approach then suddenly highlighted the importance of PIM.3.

4 The new process improvement expert training module from iNTACS - Paper at EuroSPI | © 2022, version 2.2
